Bloodborne Pathogens in the Workplace
Bloodborne Pathogens
In the Workplace

Student Book

Version 8.0

Purpose of this Guide
This MEDIC First Aid Bloodborne Pathogens Version 8.0 Student Book is solely intended to facilitate certification in a MEDIC First Aid Bloodborne Pathogens in the Workplace training class. The information in this book is furnished for that purpose and is subject to change without notice.

MEDIC First Aid certification may only be issued when a MEDIC First Aid–authorized Instructor verifies a student has successfully completed the required core knowledge objectives of the program.

Notice of Rights
No part of this MEDIC First Aid Bloodborne Pathogens Version 8.0 Student Book may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or by any information storage and retrieval system, without written permission from MEDIC FIRST AID International, Inc.

Disclaimer
HSI has used reasonable effort to provide up-to-date, accurate information that conforms to generally accepted treatment recommendations at the time of publication. These recommendations supersede recommendations made in previous MEDIC First Aid® programs. Science and technology are constantly creating new knowledge and practice. Like any printed material, this publication may become out of date over time. Guidelines for safety and treatment recommendations cannot be given that will apply in all cases/scenarios as the circumstances of each incident often vary widely. Signs and symptoms may be incomplete and can vary from person to person. Do not use the information in this program as a substitute for professional evaluation, diagnosis, and treatment from an appropriately qualified physician or other licensed healthcare provider. Local or organizational physician-directed practice protocols may supersede treatment recommendations in this program. Alert emergency medical services (EMS) or activate your emergency action plan immediately if you are not sure an emergency exists or when any person is unresponsive, badly hurt, looks or acts very ill, or quickly gets worse.

Some employees face significant health risk as a result of exposure to blood or other potentially infectious materials (OPIM).

In 1991, the Occupational Safety and Health Administration (OSHA) issued the Bloodborne Pathogens Standard, 29 CFR 1910.1030, which applies to all employees who can reasonably come in contact with human blood and OPIM in the course of their job activities.

The purpose of the standard is to protect employees by minimizing or eliminating exposure to disease-carrying microorganisms, or pathogens that can be found in human blood and other body fluids.

Every year, all employees with the potential of occupational exposure must receive training on bloodborne pathogens and exposure control methods.

Your understanding of important concepts such as engineering and work practice controls, personal protective equipment, exposure follow up, and housekeeping procedures can help reduce or eliminate your risk of being exposed to potentially infectious materials in your workplace.
The Needlestick Safety and Prevention Act
An estimated 385,000 needlestick injuries occur annually in hospital settings. Nurses are the most frequently injured, but laboratory staff, physicians, housekeepers, and other healthcare workers are also injured.

In response to concern over these exposures, Congress passed the Needlestick Safety and Prevention Act, directing OSHA to revise the Bloodborne Pathogens Standard. This revision became effective in April 2001.

The revised standard states that “safer medical devices, such as sharps with engineered sharps injury protections and needleless systems, must be used where feasible.” Safer needles have built-in safety control devices, such as those that use a self-sheathing needle, to help prevent injuries before, during, and after use through safer design features.

Since the act was implemented, there has been a 31.6% decrease in sharps injuries in non-surgical settings. For more information, OSHA has developed an excellent website dedicated to safety and prevention of needlesticks and sharps injuries. See the Hospital eTool (HealthCare Wide Hazards Module) at http://www.osha.gov.
